

Project Report Template

Important Rule: Every section must contain paragraphs of textual explanation. Screenshots, diagrams, code snippets, pseudo-algorithms, and graphs must be explained (what it shows, why designed this way, key observations, assumptions).

1. Title Page (1 page)
2. Abstract ($\frac{1}{2}$ page)
3. Introduction & Problem Statement (1 – 1.5 page)
4. Objectives ($\frac{1}{2}$ page – 4 bullets)
5. Literature Survey (2–2.5 pages, 8–10 authentic references (must cite at least 8–10 key books relevant to your attack/prevention + comparison table))
6. Mathematical Background & Justification (3 pages – proof + explanation)

A. Mathematical Model

Clearly define:

- Variables
- Assumptions
- Equations

B. Mathematical Analysis

Must explain:

- Why the baseline system is insecure
- How the attack exploits it
- Why the proposed fix improves security

C. Proof Requirement

- Minimum TWO proofs required:
 - One proof related to the attack
 - One proof related to the prevention
- Proofs must be written using syllabus-level mathematics
- Each equation must be explained in words

7. System & Attack Model (2-2.5 pages – diagram + detailed text explanation)
8. Implementation (Vulnerable + Attack + Prevention) (5–6 pages)
 - Screenshots + code flow + explanation
 - Pseudo-algorithm for the Attack (numbered steps + line-by-line explanation)
 - Pseudo-algorithm for the Prevention Mechanism (numbered steps + line-by-line explanation)
9. Results & Graphs (2–3 pages – at least 4 mandatory graphs + explanation for each)
10. Limitations + Conclusion (1 page)
11. References (8–10 authentic references (must cite at least 8–10 key books)) (1 Page)
